

What's New in Version 9

Technology has truly been moving at the speed of light this past year, and keeping up with it is a daunting and laborious undertaking. Lookout Software has been working hard over the past few months keeping OfficeCalendar compatible with all the latest technologies, while making major improvements that take advantage of all these new tools and technology.

OfficeCalendar Version 9 includes a major rewrite of our synchronization architecture; support for the newly released Outlook 2013; support for new Microsoft operating systems like Windows Server 2012; an updated de-duping tool to support the newest versions of Microsoft Outlook; and more.

NEW! Redesigned Sync Engine for increased performance and efficiency

The hardest work we've put into OfficeCalendar Version 9 has been a complete rewrite of our synchronization architecture with our entire toolset from the OfficeCalendar Outlook addin to all of our mobile apps. This rewrite has been in the making for almost one full year of planning, coding, and testing. The all new architecture may not seem like much, but the bottom line is that it makes the application faster, more reliable; and more efficient (important for mobile devices in both reduced

network data usage and battery life preservation). This, in turn, makes your life better by allowing you to more quickly and efficiently manage your schedule, tasks and contact communications.

NEW! Support for Outlook 2013

OfficeCalendar Version 9 includes a completely updated addin that supports all the new changes in Microsoft Outlook 2013. In particular, there are many new changes to Outlook contact data and how 3rd party applications interact with it. Therefore, if you have any users upgrading to Office/Outlook 2013 you'll need the Version 9 upgrade in order to support all the new changes in Outlook 2013.

NEW! Updated De-Duper with support for 64-bit Outlook Installations

With so many external devices and applications connecting to Outlook it's hard, if not impossible, to control how data is updated, which can often cause duplication of records. That led Lookout Software to develop an award-winning and top selling addin for removing duplicate records in Microsoft Outlook. While the application is sold separately, we actually build it into OfficeCalendar at no extra charge. With Version 9, we updated the de-duping application to work with 64-bit versions of Outlook and Outlook 2013.

NEW! Support for Windows Server 2012

OfficeCalendar Version 9 has tested and updated to fully work on the all new Windows Server 2012 platform. If you are planning to upgrade to the 2012 Server platform in the near future be sure to get the OfficeCalendar Version 9 upgrade.

What to see what was added in previous Versions before Version 9?

If you haven't upgrade OfficeCalendar in while are considering upgrading to version 9, you'll also be adding feature and benefits from previous versions of OfficeCalendar. If you wish to review feature list from previous versions please click on the links below:
